

# CSS Cheat Sheet: Copy & Learn

# **Boiler plate**

```
*{
    margin: 0;
    padding: 0;
}
```

#### **Font**

There are many properties related to the font, such as the face, weight, style, etc. These properties allow you to change the style or complete look of your text.

# Font-Family

```
font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
```

#### Font-Style

```
font-style: italic;
```

#### **Font-Variant**

```
font-variant: small-caps;
```

#### Font-Wieght

font-weight: bold;

#### Font-Size

font-size: larger;

#### **Font**

font: style variant weight size family;

#### **Text**

Text properties allow one to manipulate alignment, spacing, decoration, indentation, etc., in the document.

#### Text-Align

text-align: justify;

#### **Letter-Spacing**

letter-spacing: .15em;

#### **Text-Decoration**

text-decoration: underline;

# **Word-Spacing**

word-spacing: 0.25em;

#### **Text-Transform**

text-transform: uppercase;

#### **Text-Indent**

text-indent: 0.5cm;

#### Line-Height

line-height: normal;

# **Background**

As the name suggests, these properties are related to background, i.e., you can change the color, image, position, size, etc., of the document.

## **Background-Image**

background-image: url("Path");

# **Background-Position**

background-position: right top;

#### **Background-Size**

background-size: cover;

# **Background-Repeat**

background-repeat: no-repeat;

#### **Background-Attachment**

background-attachment: scrol1;

#### **Background-Color**

background-color: fuchsia;

#### **Background**

background: color image repeat attachment position;

#### **Border**

Border properties are used to change the style, radius, color, etc., of buttons or other items of the document.

#### **Border-Width**

border-width: 5px;

#### **Border-Style**

border-style: solid;

#### **Border-Color**

border-color: aqua;

#### **Border-Radius**

border-radius: 15px;

#### **Border**

border: width style color;

#### **Box Model**

In laymen's terms, the CSS box model is a container that wraps around every HTML element. It consists of margins, borders, padding, and the actual content. It is used to create the design and layout of web pages.

#### **Float**

float: none;

#### Clear

clear: both;

# Display

display: block;

# Height

height: fit-content;

#### Width

width: auto;

#### **Padding**

padding: top right bottom left;

#### **Overflow**

overflow: hidden;

# Visibility

visibility: visible;

# Margin

margin: top right bottom left;

#### Colors

With the help of the color property, one can give color to text, shape, or any other object.

#### Color

color: cornsilk;

# Opacity

opacity: 4;

# **Template Layout**

Specifies the visual look of the content inside a template.

## **Box-Align**

box-align: start;

#### **Box-Direction**

box-direction: normal;

#### **Box-Flex**

box-flex: normal;

#### **Box-Flex-Group**

box-flex-group: 2;

#### **Box-Orient**

box-orient: inline;

#### **Box-Pack**

box-pack: justify;

# **Box-Sizing**

box-sizing: margin-box;

#### Max-Width

max-width: 800px;

#### Min-Width

min-width: 500px;

#### **Max-Height**

max-height: 100px;

#### Min-Height

min-height: 80px;

## **Table**

Table properties are used to give style to the tables in the document. You can change many things like border spacing, table layout, caption, etc.

#### **Border-Collapse**

border-collapse: separate;

## **Empty-Cells**

empty-cells: show;

# **Border-Spacing**

border-spacing: 2px;

#### **Table-Layout**

table-layout: auto;

## Caption-side

caption-side: bottom;

#### **Columns**

These properties are used explicitly with columns of the tables, and they are used to give the table an incredible look.

#### Column-Count

column-count: 10;

#### Column-gap

column-gap: 5px;

#### Column-Rule-Width

column-rule-width: medium;

#### Column-Rule-Style

column-rule-style: dotted ;

#### Column-Rule-Color

column-rule-color: black;

#### Column-Width

column-width: 10px;

#### Column-Span

column-span: all;

# **List & Markers**

List and marker properties are used to customize lists in the document.

# **List-Style-Type**

list-style-type: square;

# **List-Style-Position**

list-style-position: 20px;

## List-Style-Image

list-style-image: url(image.gif);

#### **Marker-Offset**

marker-offset: auto;

# **Animations**

CSS animations allow one to animate transitions or other media files on the web page.

#### **Animation-Name**

animation-name: myanimation;

#### **Animation-Duration**

animation-duration: 10s;

# **Animation-Timing-Function**

animation-timing-function: ease;

## **Animation-Delay**

animation-delay: 5ms;

#### **Animation-Iteration-Count**

animation-iteration-count: 3;

#### **Animation-Direction**

animation-direction: normal;

# **Animation-Play-State**

animation-play-state: running;

#### **Animation-Fill-Mode**

animation-fill-mode: both;

# **Transitions**

Transitions let you define the transition between two states of an element.

# **Transition-property**

transition-property: none;

#### **Transition-duration**

transition-duration: 2s;

#### **Transition-timing-function**

transition-timing-function: ease-in-out;

## **Transition-delay**

transition-delay: 20ms;

# **CSS Flexbox**

Flexbox is a layout of CSS that lets you format HTML easily. Flexbox makes it simple to align items vertically and horizontally using rows and columns. Items will "flex" to different sizes to fill the space. And overall, it makes the responsive design more manageable.

# Parent Properties (Flex Counter)

# display

display: flex;

#### flex-direction

```
flex-direction: row | row-reverse | column | column-reverse;
```

#### flex-wrap

```
flex-wrap: nowrap | wrap | wrap-reverse;
```

#### flex-flow

```
flex-flow: column wrap;
```

## justify-content

```
justify-content: flex-start | flex-end | center | space-
between | space-around | space-evenly | start | end | left
| right ... + safe | unsafe;
```

# align-items

```
align-items: stretch | flex-start | flex-end | center |
baseline | first baseline | last baseline | start | end |
self-start | self-end + ... safe | unsafe;
```

#### align-content

align-content: flex-start | flex-end | center | spacebetween | space-around | space-evenly | stretch | start |
end | baseline | first baseline | last baseline + ...
safe | unsafe;

# **Child Properties (Flex Items)**

#### order

```
order: 5; /* default is 0 */
```

#### flex-grow

```
flex-grow: 4; /* default 0 */
```

#### flex-shrink

```
flex-shrink: 3; /* default 1 */
```

#### flex-basis

```
flex-basis: | auto; /* default auto */
```

#### flex shorthand

```
flex: none | [ <'flex-grow'> <'flex-shrink'>? || <'flex-basis'> ]
```

# align-self

```
align-self: auto | flex-start | flex-end | center | baseline
| stretch;
```

#### **CSS Grid**

Grid layout is a 2-Dimensional grid system to CSS that creates complex responsive web design layouts more easily and consistently across browsers.

# Parent Properties (Grid Container) display

display: grid | inline-grid;

grid-template-columns

grid-template-columns: 12px 12px 12px;

grid-template-rows

grid-template-rows: 8px auto 12px;

grid-template

grid-template: none | /

column-gap

column-gap: ;

row-gap

row-gap:;

#### grid-column-gap

grid-column-gap: ;

# grid-row-gap

grid-row-gap:;

#### gap shorthand

gap: ;

# grid-gap shorthand

grid-gap: ;

# justify-items

<mark>justify-items</mark>: start | end | center | stretch;

# align-items

align-items: start | end | center | stretch;

# place-items

place-items: center;

# justify-content

justify-content: start | end | center | stretch | spacearound | space-between | space-evenly;

#### align-content

```
align-content: start | end | center | stretch | space-
around | space-between | space-evenly;
```

#### place-content

```
place-content: / ;
```

#### grid-auto-columns

```
grid-auto-columns: ...;
```

## grid-auto-rows

```
grid-auto-rows: ...;
```

## grid-auto-flow

```
grid-auto-flow: row | column | row dense | column dense;
```

# Chid Properties (Grid Items)

# grid-column-start

```
grid-column-start: |  | span | span | auto;
```

# grid-column-end

```
grid-column-end: | | span | span | auto;
```

#### grid-row-start

place-self: center;

```
grid-row-start:
                   span
                                  auto;
                           span
grid-row-end
grid-row-end:
                  span
                          span
                                  auto;
grid-column shorthand
grid-column: / | / span ;
grid-row shorthand
grid-row: / |
                span;
grid-area
grid-area:
justify-self
justify-self: start |
                 end
                       center |
                                stretch;
align-self
align-self: start | end | center |
                              stretch;
place-self
```
